

Accountability, innovation and collaboration

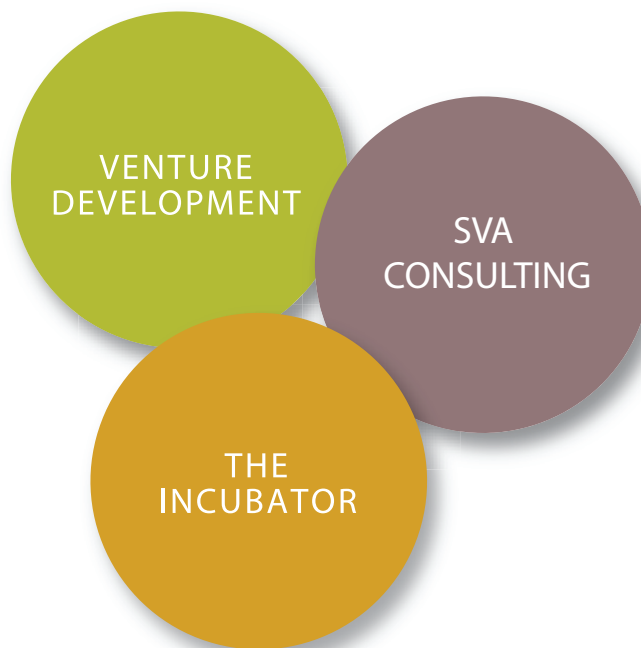

We provide multi-year funding and tailored support to a carefully selected portfolio of non-profit ventures led by outstanding social entrepreneurs. This support includes assistance with strategic planning, financial sustainability, measurement and performance evaluation. We leverage SVA networks to help them scale innovative responses to entrenched problems, meet the challenges of organisational growth and communicate the impact of their work.

How we choose a social venture to support

Before SVA supports a social venture by including it in the venture portfolio, we conduct a detailed analysis on several key criteria:

- Performance of the social entrepreneur and leadership team
- Likelihood for creating real social impact at the root cause of community issues
- Ability to measure outcomes
- Potential to scale and replicate programs

We incubate promising new ideas and assist early stage ventures and social entrepreneurs to develop and grow their programs. We promote collaboration and learning amongst and across sectors, partnering with innovative programs to strengthen outcomes in the social sector. This support helps those who are experimenting with promising new ways of making change happen and enables SVA to help replicate proven models for social change already established overseas.

We help strengthen the broader social sector by providing customised consulting, mentoring, workshop programs and web-based learning services to non-profit organisations and philanthropists. By doing so, we are improving the environment in which all social entrepreneurs operate and therefore increasing their potential to succeed.
